

RAMSAY FOY

FULL STACK SOFTWARE ENGINEER

Full Stack Software Engineer. Finished 3rd year of a Bachelor's of Engineering (BEng) at Edinburgh Napier University. I will be completing Honours in session 2025-26. I love everything to do with user interfaces in software and developing tools, websites, and applications that make our lives easier. I've been tinkering with software since I was a kid and started my career at a young age, between doing freelance and working for a startup when I was in high school.

I am also passionate about music production & musical composition. I have an SQA Advanced Higher in Music Technology and have played piano almost my whole life up to ABRSM grade 6.

EXPERIENCE

Origo Services Ltd : Intern Developer

I worked as a summer intern at Origo, contributing to software solutions that drive innovation within the financial industry. I applied modern web, backend, and serverless infrastructure technologies to support the development of key projects. The experience provided an excellent opportunity to refine my technical skills, gain new ones, and collaborate within a large multidisciplinary team full of great people. My time at Origo was immensely valuable and will be a highlight of my early career.

June 2025 - September 2025

ENU Drone Operations : Software Engineer

A project I did as part of a group for Edinburgh Napier University where we streamlined their existing paper-based drone operations with a custom website, making the process from planning to going into the field much faster. This opportunity was followed up with the potential for paid work with the university.

Jan 2025 - June 2025

Studyverse : Junior Software Engineer

An EdTech startup helping students with focus and studying. I was one of the first employees, and one of two engineers

SKILLS

I have extensive experience in:

Frontend Development

React / NextJS

TailwindCSS / CSS / CSS-in-JS

JavaScript / Typescript

Bun / NodeJS

Backend Development

Express / Hono

GraphQL

REST / SSE / Streaming

OpenAPI

WebSockets

Go (STDHTTP/GIN)

Java

Rust (w/ Tokio)

.NET

AWS Serverless

Vercel / Railway / Fly

Linux

Postgres / SQLite / MySQL

HOBBIES

Musical composition

Vinyl collecting

Reading

Gaming

Coffee

References provided on
request

building the MVP product that was granted almost \$2m in investment.

I continued working on the web product beyond that: building more features, fixing bugs, and managing the community support systems.

Feb 2022 - Oct 2023

Freelance Software Engineer

During this period I built websites, discord bots, and Minecraft server networks/plugins for people on a commission basis. It was through these projects that I gained the contacts that landed me my first job.

2019 - Dec 2022

EDUCATION

Edinburgh Napier University

Bachelors of Engineering with Honours (BEng Hons) : Computer Software Engineering

2024-2026

Fife College

Higher National Diploma (HND) : Computer Software Engineering Grade: A

2022 - 2024

NOTABLE PERSONAL PROJECTS

esbuild-plugin-d.ts

A plugin I created and published for the ESBUILD build tool that hooks into the typescript compiler api and builds types without another build step. 20K average weekly downloads on NPM. [See it on GitHub](#)

Concurrent

Catena

A social git server I'm building in Go 1.26 & NextJS. I wanted to see if I was capable of building something like GitHub. [See it on GitHub](#). Has a backend using REST/OpenAPI, Postgres, git http-backend CGI.

Concurrent

Postalgo

A social site for sharing niche music and tracking your music over time. Combines web solutions such as NextJS/React, TailwindCSS, Convex, Clerk, Spotify SDK. <https://www.postalgo.org>

Concurrent

Bub & Bill

A submission for the EdJam game jam (part of Global Game Jam) at Edinburgh Napier University. This was built using Godot by a multidisciplinary team of 5.
